

Aerco helps BAE Systems

Aerco deliver solutions for all project requirements, including Falcon, Type 45, Harrier II, Euro-Fighter and Terrier.

As an industry leading stockist and distributor of electrical and electromechanical components, we have an enviable heritage of supporting BAE Systems throughout the UK for many years.

Our commitment to BAE Systems is reflected in our comprehensive range of products and worldwide sourcing capabilities, for components both new and obsolete or difficult to obtain. Our DESIGNSUPPORT team of technical specialists have over 40 years experience in sourcing and supplying electromechanical components to the aerospace and defence, as well as having extensive experience in transportation, industrial and medical industries.

Working with you, we can ensure that the right products are selected for your project requirements, and our stock holding capabilities mean that we do not have a minimum order quantity, helping you with stock control and improving profitability. We can also provide kitting services with our own dedicated connector assembly lines and customisation and modification facility.

We understand that in today's competitive market many of you are often tied to contract, which is why we also offer annual price list agreements ensuring you meet your commitments.

As you would expect, we are BAE/AG/20008/CCS approved as well as listed in the Approved Supplier Register SC10. This is also supported by our Extostar procurement system membership.

Our libraries of Pan-Spec drawings and JN specs allow us to accurately define components used in the Tornado aircraft and Euro Fighter respectively.

As a result of our capabilities and a successful partnership, we are now the preferred supplier to many BAE Systems businesses.

Our extensive product range covers:

[Backshells](#)
[Circuit Breakers](#)
