

Latest Press Release

Our major price commitment to Telegärtner connectors

At Aerco we have made a major commitment to Telegärtner coaxial and RF connectors by increasing stock levels at the same time as absorbing a UK price rise. Despite the fact that there has been a price increase from Telegärtner of around 9% on many products, prices will not be raised at Aerco for the foreseeable future. We are making this initiative to ensure that we maintain the short delivery times and competitive prices that we have always offered for these popular products.

New fans designed for high pressure situations

The Delta GFB series is a new range of extra-deep fans designed to give maximum performance in modern electronic enclosures that require high airflow in high pressure environments. Available in frame sizes of 60, 80, 92 and 120mm, supply voltages are 12 or 24VDC (all frame sizes) and 48VDC (120mm only) and the depth of 50.8mm provides airflow from 15.1 up to 95.6 litre/sec against high system pressure. This makes it possible to optimise a wide range of cooling solutions.

New LED NVIS compatible indicators

New LED night vision compatible indicators from Oxley are designed for all defence and aerospace applications that use NVG/NVIS systems. Ideal as a direct replacement for incandescent lamps offering all the advantages of LED technology, these rugged indicators are MIL-STD-3009 compliant and offer true sunlight readability and are panel-sealed to IP68. A modular design allows a wide range of colour and feature options to be incorporated into different lamp styles.
