ADDA DC fan is a high performer

The new AD 12738 DC fan from ADDA is a real performer that is ideal for cooling modern, densely packed enclosures. Built in the 127 mm x 127 mm x 38 mm frame size it produces airflow up to 114 litres/sec and is ideal for operating in confined spaces where high pressures occur. Working from 12V, 24V or 48V it has tachometer and fan-failure signal wires for use in 'intelligent' cooling systems and high quality ball bearings provide a life of 70,000 hours at 40°C.

Aerco appointed key distributor for Binder

Aerco has been appointed as a key distributor for Binder industrial circular connectors in an agreement that recognises Aerco's contribution to the growth of Binder's business over the past seven years.

Aerco will hold one of the largest stocks of Binder products in the UK and provide a high quality technical support and design-in service. Items not stocked at Aerco will be supplied on three to four weeks delivery from the new Binder UK headquarters in Hemel Hempstead.

New LED cockpit light is NVG compatible

The new Paramount Panels (UK) NVG compatible, LED cockpit utility light combines the functions of a fixed spot or floodlight and portable hand torch and is ideal for use in all types of search and rescue applications and military fixed wing and rotary wing aircraft.

Designed primarily for map reading and general floodlighting without compromising NVG operational flight safety, the light may be removed from the mounting and used as a torch over the full length of the lead.
