New LED feature light sets new standards

New from Aerco is an LED high bay feature light from Dialight that is specifically designed to replace conventional lighting in a wide range of indoor and outdoor industrial applications. The HB series is UL, CSA and CE approved, conforms to NEMA 4X, is mercury free, IP66 rated and has a high level of resistance to shock. Its low profile, light-weight and versatile mounting options makes it ideal for warehouses, garages, bridges, tunnels and general area lighting.

Safety light curtains set new standards for reliability and cost

Aerco now supplies the Contrinex range of safety light curtains that sets new standards in terms of reliability and value for money. Safetinex light curtains correspond to safety Category 4 (EN/ISO 13849-1) and Type 4 (EN/IEC 61496 -1 and -2) and are designed to ensure immediate machine shut down in the event of a person or any part of the body entering a danger zone.

The modular design allows fully tested systems to be delivered on a very short time scale.

Low-smoke, zero-halogen cables

When standard cable and wire burns the insulating materials emit smoke, gas and acid that can be highly toxic but Alpha Wire's low-smoke, zero-halogen communication and control cable (LSZH) totally eliminates the halogen emitted without compromising on mechanical and electrical performance. LSZH cable is available in multi-pair and multi-conductor configurations and in versions that have a foil shield for EMI protection and improved signal integrity.
