

Latest Press Release

Hermetically sealed D38999 on two-week delivery

Aerco now supplies the Glenair range of hermetically sealed D38999 connectors that are used widely in the aviation, naval and aerospace industries on two weeks delivery.

This is compared with the industry average of eight weeks and no MOQs are required on the more common shell styles and contact layouts. They are available in MIL-DTL-38999 series I, II, III and IV and are on the Qualified Product List (QPL).

Keeping cool in damp environments

New AC, IP-rated, axial fans from Bi-Sonic are ideal for cooling cabinets that are located outdoors or where there is a danger of water ingress. Approved to CE, CSA, TUV, UL, and VDE and protected to IP54, the range includes 80 and 120mm square and 170 x 150mm frame sizes. They have metal frames with die-cast aluminium housing and metal or plastic impellers that are individually balanced.

Kinky pins just the right shape for designers

Now in stock is the Oxley range of Kinky Pin® PCB connectors and test points that use a unique 'kinked' retention mechanism to retain the pin in the PCB prior to soldering.

'Kinky Pin' is an established favourite for plated-through-hole assembly but it is now being used widely as a compliant terminal where no solder is used or for when using through-hole-reflow techniques.

New cable labelling system saves time and money

Aerco now supplies TIPS, a top quality, computer generated cable marking system from Hellermann Tyton that will print on to self-adhesive labels and heat-shrink and non-heat shrink tubing. A new type of clip-on TIPTAG is also provided. Fast and simple to operate TIPS reduces labour time and the risk of errors and minimises waste while the high quality, permanent marking is product enhancing.
