Robust Circular Power & Signal Connectors - Size 1

# Hypertac® Hyperboloid Technology

Smiths Interconnect offers an extensive range of superior contact technologies suitable for standard and custom solutions. Hypertac® (HYPERboloid conTACT) is the original superior performing hyperboloid contact technology designed for use in all applications and in harsh and demanding environments where high reliability and safety are critical. The inherent electrical and mechanical characteristics of the Hypertac hyperboloid contact ensures unrivalled performance in terms of reliability, number of mating cycles, low contact force and minimal contact resistance. The shape of the contact sleeve is formed by hyperbolically arranged contact wires, which align themselves elastically as contact lines around the pin, providing a number of linear contact paths.

Features	Benefits
<b>Low insertion/extraction forces</b> The angle of the socket wires allows tight control of the pin insertion and extraction forces. The spring wires are smoothly deflected to make line contact with the pin.	<b>High density interconnect systems</b> Significant reductions in size and weight of sub-system designs. No additional hardware is required to overcome mating and un-mating forces.
<b>Long contact life</b> The smooth and light wiping action minimizes wear on the contact surfaces. Contacts perform up to 100,000 insertion/extraction cycles with minimal degradation in performance.	<b>Low cost of ownership</b> The Hypertac contact technology will surpass most product requirements, thus eliminating the burden and cost of having to replace the connector or the entire subsystem.
<b>Lower contact resistance</b> The design provides a far greater contact area and the wiping action of the wires insures a clean and polished contact surface. Our contact technology has about half the resistance of conventional contact designs.	<b>Low power consumption</b> The lower contact resistance of our technology results in a lower voltage drop across the connector reducing the power consumption and heat generation within the system.
<b>Higher current ratings</b> The design parameters of the contact (e.g., the number, diameter and angle of the wires) may be modified for any requirement. The number of wires can be increased so the contact area is distributed over a larger surface. Thus, the high current carried by each wire because of its intimate line contact, can be multiplied many times.	<b>Maximum contact performance</b> The lower contact resistance of the Hypertac contact reduces heat build-up; therefore Hypertac contacts are able to handle far greater current in smaller contact assemblies without the detrimental effects of high temperature.
<b>Immunity to shock &amp; vibration</b> The low mass and resultant low inertia of the wires enable them to follow the most abrupt or extreme excursions of the pin without loss of contact. The contact area extends 360° around the pin and is uniform over its entire length. The 3 dimensional symmetry of the Hypertac contact design guarantees electrical continuity in all circumstances.	<b>Reliability under harsh environments</b> Harsh environmental conditions require connectors that will sustain their electrical integrity even under the most demanding conditions such as shock and vibration. The Hypertac contact provides unmatched stability in demanding environments when failure is not an option.

## Robust Circular Power & Signal Connectors

**M23 Signal and Power Connectors** in favour of motor drive applications. For the installation, crimp contacts are used which guarantee high quality of the connection, reducing the installation costs at the same time.

Hand-operated and fully automatic crimping tools can be used to assemble the crimp contacts. There are two different Hypertac® hyperboloid contact types available: Machined and stamped. These two types of contacts have different characteristics in terms of how the termination is made.

Machined contacts: With this popular type of contact, the suitable contact size is matched to the wire gauge of the cable. Stamped contacts: The crimping sleeve allows a wider range of wire gauges to be crimped. Furthermore, the insertion and extraction force is usually lower by using stamped round pins and HCS™ sockets. Stamped contacts are supplied on reels for use with automatic feed crimping tools.

Hypertac® hyperboloid contact: Hypertac® is a superior performing hyperboloid contact technology designed for use in harsh and demanding environments where high reliability and safety are critical. The inherent electrical and mechanical characteristics of the Hypertac hyperboloid contact ensures unrivalled performance in terms of reliability, number of mating cycles, low contact force and minimal contact resistance. These performance characteristics provide a real commercial benefit in terms of the total installed cost of ownership.

In addition our M23 connectors offer outstanding electro-magnetic compatibility protection through a 360° screen connection.

**Robust technology for use in harsh environments**

## Features & Benefits

### Superior performance

- Hypertac® contact technology ensures immunity to shock and vibration and minimal contact resistance
- Outstanding protection against electromagnetic interference through a full 360° screen shielding
- O-rings for protection against vibration

### Variety of contacts

- Crimp contacts for all current cable cross sections available
- Signal connectors with crimp and solder contacts

### Stamped hyperboloid contacts on reels

- Favourable price and reduced processing costs
- Fully automatic workable and reduced assembly time
- High reliability wire B-crimp and additional insulation O-crimp

### Wide cable clamp range

- Can accept cable diameter from 5 to 18.5 mm

### UL certified

- UL/CSA approval file No. 178462

# Cable Clamps & Accessories

## M23 Power Connector Series L

Cable clamp no. 170 for LPNA/LRNA	Clamp range	
	With reducing sleeve from Ø 7.7–12 mm Without reducing sleeve from Ø 11–14.5 mm Can be used for shielded and non-shielded cables	
Cable clamp no. 213 for LPLA/LRLA	Clamp range	
	Onion ring seal for different cable diameters from Ø 7.5–18.5 mm Thickness of shielding up to Ø 1 mm Can be used for shielded and non-shielded cables	
Cable clamp no. 260/261/262 for LVMA/LYMA	Clamp range	
	.260 cable diameter Ø 5–9 mm .261 cable diameter Ø 9–15 mm .262 cable diameter Ø 16mm Can be used for shielded and non-shielded cables	
Thread protection cap	Part number	
	031.001053.1000	
Dust shield caps	Part number	Description
	C/BEL/1	Dust shield cap for extension and receptacle
	C/BEL/7	Dust shield cap for extension and receptacle with chain 125 mm
	C/BEL/5	Dust shield cap for plug with chain 125 mm

# Applications

## M23 Connectors

### Servos & Drives

- High current and voltage ratings
- Shock and vibration proof
- Low contact resistance
- Minimal insertion/extraction forces
- Earth connection for power connectors

### Controls

- Hyperboloid contacts
- IP67 sealing
- Low electrical resistance
- Long life
- Low rate of wear

### Encoders

- High signal integrity ensuring failure free performance
- 360° EMC shielding connection
- Stamped hyperboloid contacts on reels
- High performance in harsh environment

### Machinery

- Minimum service requirements
- Low wear of plating surfaces for long life
- High current rating
- Uniform electrical and mechanical characteristics over a high number of operations

### Conveyance

- Resistance against oxidation and corrosion
- Superior reliability for critical applications
- Protection against humidity and pollution
- Customized keying options to prevent mismatching

### Robotics

- Various types of cable clamps
- Broad variety of contacts
- Quick and easy exchange of the connector system
- ROHS compliant
- UL certified

# HCS™ Contacts

Stamped Hyperboloid Contacts on Reels

The HCS™ contact (Hyperboloid Contact Stamped) is the advanced evolution of the machined HYPERTAC® Hyperboloid Contact Technology that is ideal for higher volume applications requiring a fully automated process.

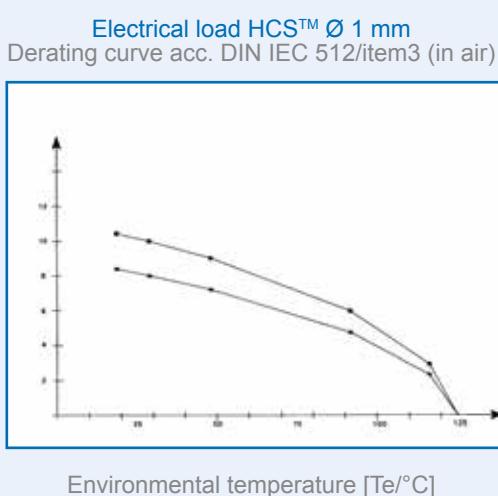

The demand for lower cost hyperboloid contacts led Smiths Connectors to the development of the stamped/rolled HCS contact, that is supplied on a reel and features an open crimp barrel design.

For all variations, the wire cage has the same design characteristics. In the contact area all single contact flaps are made in a circle shape which guarantees "wire quality". The HCS contacts on reels for crimping machines with automatic feeder lines are fully compatible with our machined Hypertac® hyperboloid contacts.

Vibration test acc. to DIN EN 60512/item4 35g X/Y/Z sinusoidal for 50h each without contact interrupts and without any change in contact resistance [ $<5\text{m}\Omega$ ].

Smiths Connectors offers a full service for crimping tools:

- Applicators for all typical crimp devices
- Hand crimping tools for field installation

## Stamped Hyperboloid Contacts

### Features & Benefits

- Favourable price
- Fully automatic processable
- Reduced assembly time
- High reliability wire B-crimp
- Additional insulation crimp
- Interchangeable with machined round contacts

### Specifications

#### Materials

Body: Tin-bronze

Plating: partly gold plated

Sleeve: stainless steel (sockets)

#### Crimp Geometry

Wire crimp: B-Crimp

Insulation crimp: O-Crimp

#### Mechanical

Operating Temperature: -40°C to 125°C

Insertion/extraction force: <4 N

#### Electrical

Contact resistance: <5 mΩ

**Note:**

HCS™ is a registered Trademark of Smiths Interconnect
